

PERSPECTIVE

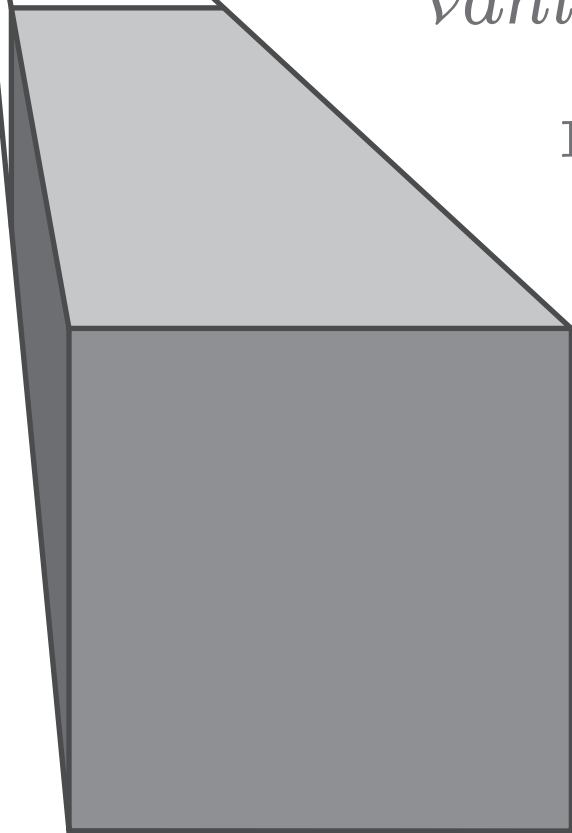

perspective: a representation on a flat surface
of an image as it is perceived by the eye

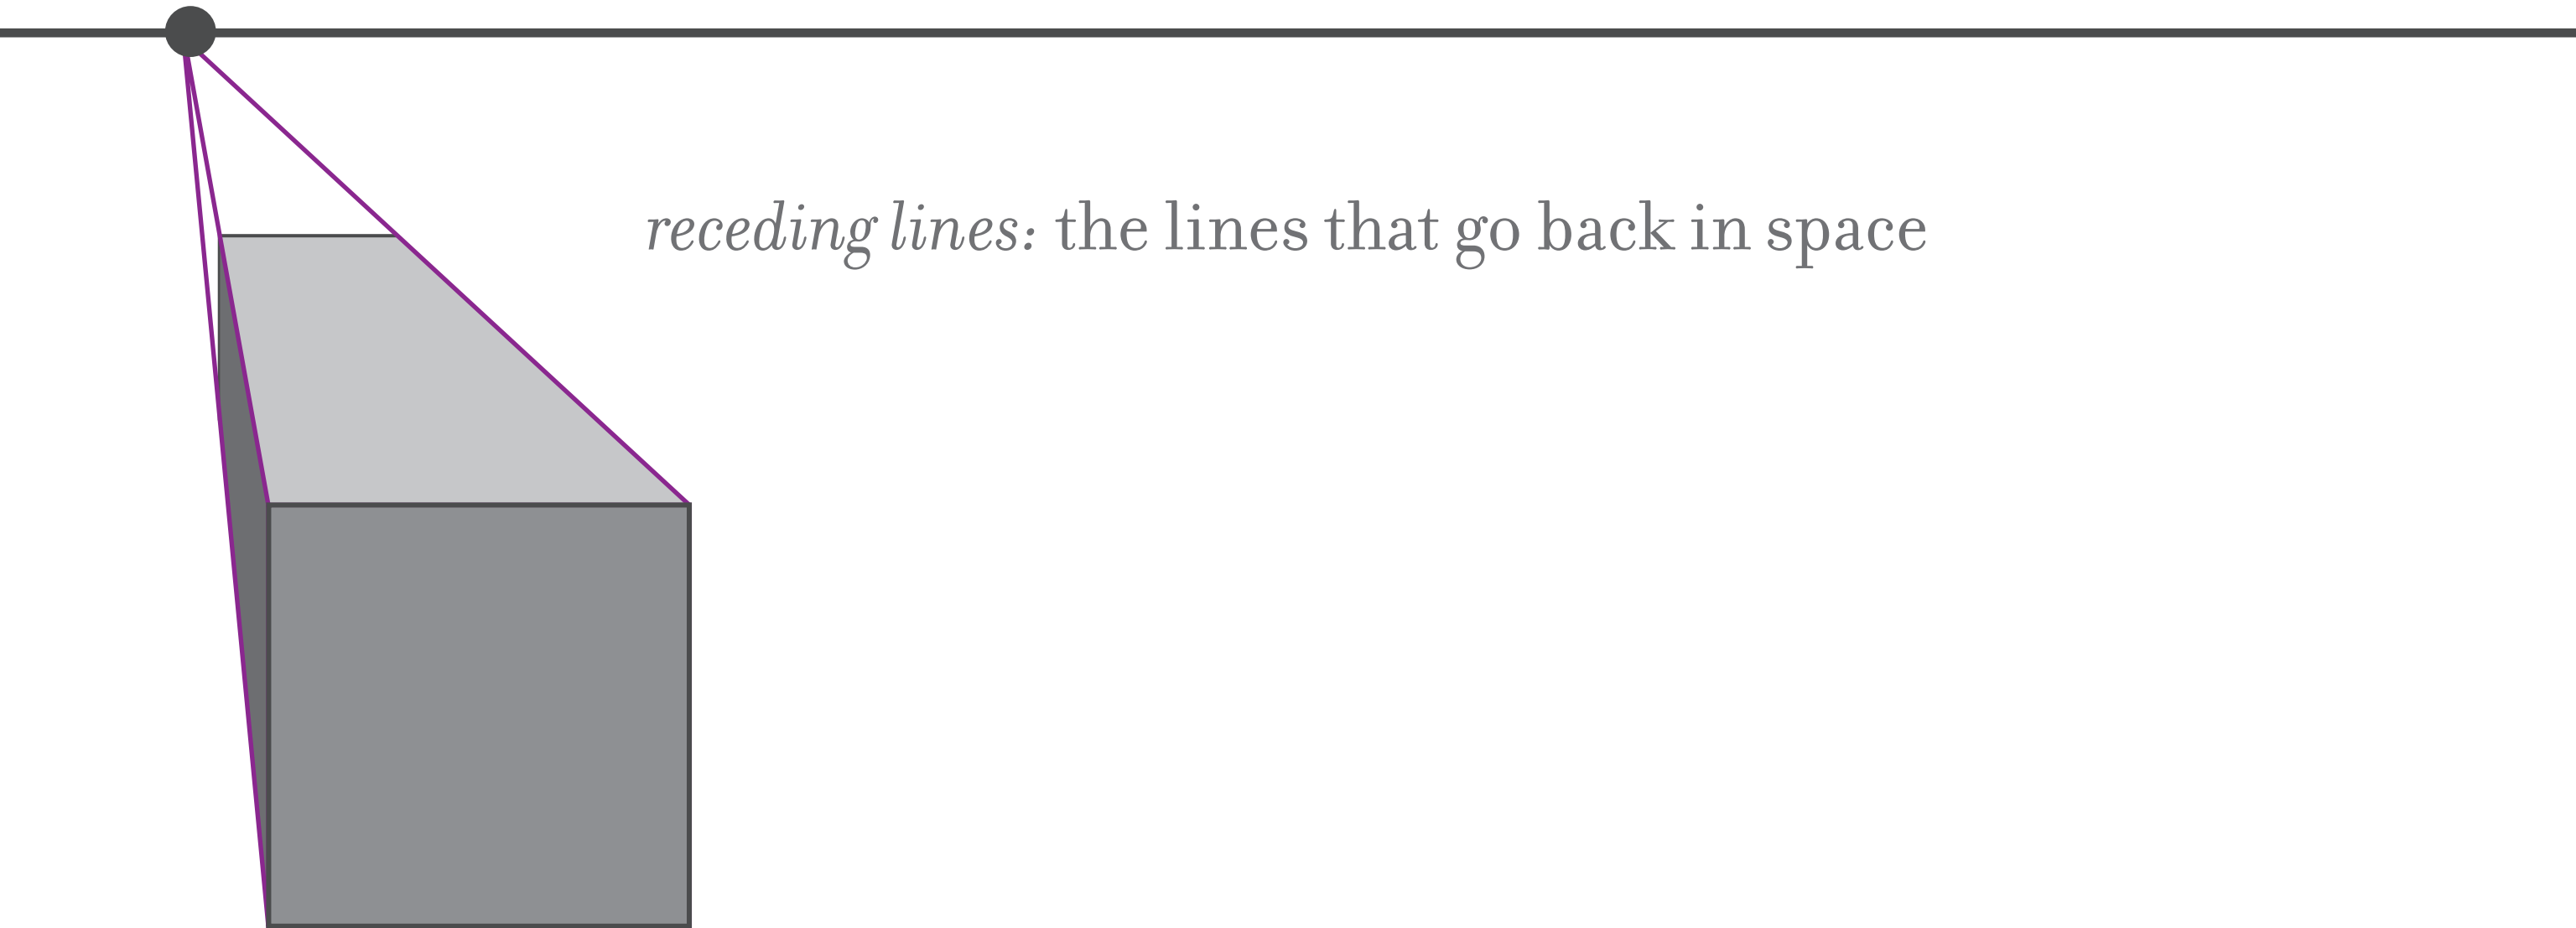

horizon line: horizontal line across
the picture at eye level

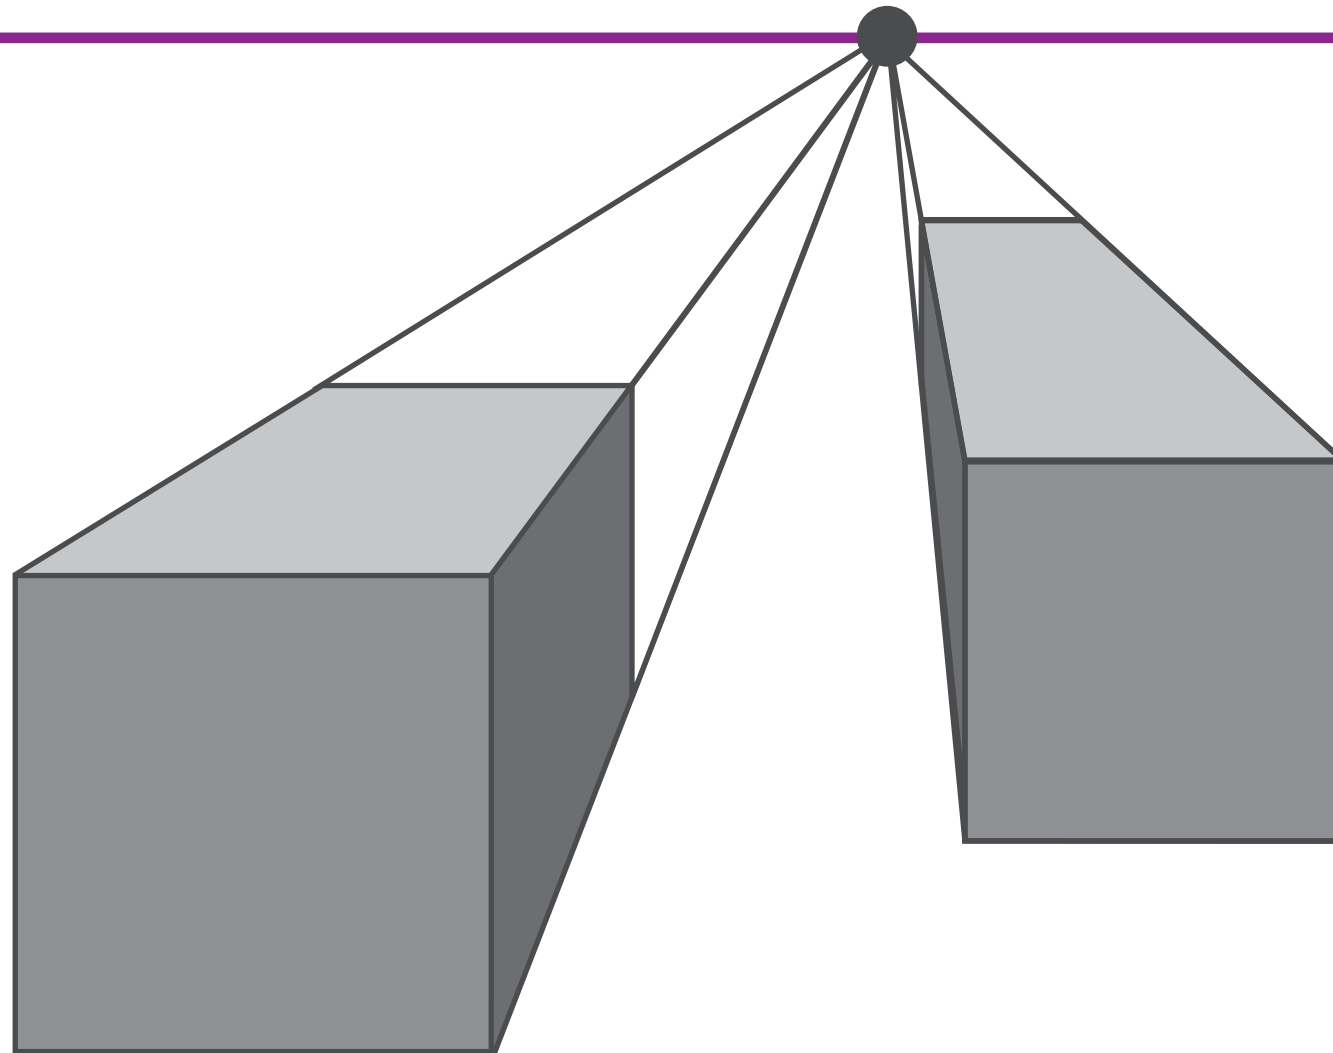

vanishing point (vp): the point in which your sight
meets at the farthest point on the horizon

receding lines: the lines that go back in space

one point perspective: the front of the object is drawn like it is facing you, the sides of the object recede at a 45° angle

two point perspective: the corner of an object is drawn facing you
